

What are your specific aims for taking part in "AFRIKA KOMMT!"?

I want to take part in this program because I believe it helps foster economic cooperation with Africa. It will offer me, as a young African professional from sub-Saharan Africa, an opportunity to gain international work experience and undergo management training which will build networks in Germany.

- **Professional Development:** Acquiring advanced technical, management, and leadership skills to apply in their home countries.
- **Intercultural Competence:** Learning German, experiencing the culture, and developing the ability to function in diverse, global teams.
- **Networking:** Building a strong network of contacts across Africa and Germany for future collaboration.
- **Knowledge Transfer:** Learning new technologies, working methods, and business strategies from leading German companies.
- **Long-term Impact:** Becoming a "bridge-builder" to foster economic cooperation between sub-Saharan Africa and Germany.

During this program I want to gain the following skills

- Refine my leadership and management competency.
- Access networks & opportunities for career acceleration.
- Improve my intercultural competence.
- Broaden my perspective and stir up innovation.
- Achieve personal growth.

During the programme, I expect to gain a blend of technical and soft skills, specifically focusing on problem-solving, data analysis, and project management, alongside enhancing my communication, teamwork, and leadership abilities. I aim to develop greater adaptability, time management, and confidence in a professional environment

- **Professional & Soft Skills:** Improved communication, teamwork, leadership, and emotional intelligence.
- **Operational Skills:** Project management, time management, and organizational abilities.
- **Analytical & Technical Skills:** Data analysis, critical thinking, and industry-specific technical proficiency.
- **Personal Development:** Increased self-confidence, adaptability, and a strong work ethic.

These skills will help me transition from theoretical knowledge to practical application in a real-world setting.

AI Systems Engineer in the SAP Field Service Management (FSM)

Field service management software from SAP is a comprehensive, AI-enabled cloud solution that provides tools for scheduling, dispatching, and tracking field technicians, letting you resolve customer issues faster. Artificial intelligence engineers are individuals who use AI and machine learning techniques to develop applications and systems that can help organizations increase efficiency, cut costs, increase profits, and make better business decision.

The first profile I chose was **AI Systems Engineer in the SAP Field Service Management (FSM)**. This profile is responsible for designing, building, and deploying enterprise-grade Artificial Intelligence (AI) and Generative AI (GenAI) solutions that enhance service operations. As an engineer, I will translate AI concepts into production-ready systems, focusing on areas like automated scheduling, predictive maintenance, and intelligent, agent-driven workflows.

Responsibilities.

- **Developing AI/ML Models:** Creating algorithms for optimizing technician schedules, predicting job durations, and determining the best-suited technician based on skills and location.
- **Implementing Generative AI:** Deploying GenAI agents to automate tasks such as generating service reports, troubleshooting, and summarizing service calls.
- **Building Scalable Infrastructure:** Developing data pipelines and implementing MLOps practices to ensure AI models are robust, secure, and compliant with enterprise standards.
- **Integrating with SAP Ecosystem:** Ensuring seamless integration of AI solutions within SAP FSM, SAP S/4HANA, and SAP Business Technology Platform (BTP)

How this Profile Links With My Qualifications

- **Technical Proficiency:** Deep understanding of modern AI frameworks (e.g., TensorFlow, PyTorch, scikit-learn) and programming languages like Python and Java.
- **Cloud & MLOps:** Proven track record in developing cloud-native products and managing model lifecycles.
- **Data Engineering:** Ability to build data pipelines and handle large-scale datasets.
- **Domain Expertise:** Experience with field service, IT service management (ITSM), or enterprise asset management (EAM) is highly valued

AI plays a significant role in IT service management (ITSM) by enhancing various aspects of IT operations and customer support, including:

- Automation: AI can automate routine tasks and processes, such as incident routing, password resets, and software updates.
